

# Nextiva Transit

## Fleet Manager

For Highly Effective, Manageable, and Scalable On-Board CCTV Systems

Nextiva Fleet Manager helps transit organisations improve on-board safety for passengers and staff and reduce losses from liability, vandalism, and theft.

Designed to manage CCTV devices on up to 1,000 buses or train carriages, Nextiva Fleet Manager reduces cost of ownership and operation and can significantly lower the expense and administrative overhead associated with adding new CCTV equipment to a growing transit infrastructure.

### **Centralised CCTV Management and Health Monitoring for Reliable, Cost-Effective Operation**

Nextiva Fleet Manager streamlines management of your on-board CCTV systems by enabling them to be centrally configured and managed. Automated device health checking and problem notification reduce device down time, lower service and maintenance costs, and help ensure that critical images are available when needed. As firmware updates become available, Nextiva Fleet Manager can deliver them to all managed devices, simplifying maintenance. And when new CCTV devices are added, they can be configured and managed as easily as the devices that Nextiva Fleet Manager already controls.

### **Flexible Video Upload for Addressing Events, Claims, and Criminal Activity**

Nextiva Fleet Manager can upload video automatically or on demand, helping transit organisations respond effectively to important events and build evidence for addressing claims and criminal activity. For example, if a driver triggers an alarm, Nextiva Fleet Manager automatically detects when the vehicle next returns to a station or depot and then uploads the pertinent video and data. If a significant event is reported at a later date or time, an upload can be scheduled to occur the next time the train enters a station or the bus returns to the depot.

### **Key Features**

- Centralised CCTV management for up to 1,000 buses or train carriages
- Automated health checking and problem notification
- Scheduled or automatic upload of video and data
- Live transmission of critical event video via WLAN
- Built on open platform for GSM, WLAN, 3G, and CDMA interoperability
- Simplified delivery of new configuration or firmware to entire fleet

### Live Video Transmission for Highly Effective Emergency Management

When a critical event occurs, Nextiva Fleet Manager can transmit live video and data via wireless LAN (WLAN) to central monitoring stations, police departments, and other agencies, as well as to mobile video monitors in first response vehicles. Nextiva Fleet Manager helps expedite emergency event response, providing actionable intelligence for more rapid and effective emergency handling.

### Open Platform-Based for Easy Interoperability with Communications Infrastructure

Nextiva Fleet Manager is built on an open platform and integrates readily with GSM, WLAN, 3G, and CDMA. This integration promotes highly reliable on-board transmission and enables transit organisations to make the most of the sophisticated wireless communications technologies available to them.

### Nextiva Transit: The Industry's Most Comprehensive Video Security Portfolio

Nextiva Fleet Manager is part of Nextiva Transit, the industry's most comprehensive video security portfolio for public transportation today. Built on Verint expertise from thousands of successful deployments, Nextiva Transit captures, analyses, and transmits video from virtually any fixed or mobile location — on board buses and trains, in stations and parking lots, depots and train yards. This integrated video portfolio features a wide array of wireless and wireline devices, sophisticated video analytics, versatile video management software, automated system-wide health monitoring, and rugged mobile cameras, video monitors, and DVRs. Nextiva's easy integration with CCTV, physical security, emergency response, and on-board information systems streamlines deployment and generates a more complete and actionable view of transit operations.

*Plus, Nextiva Transit is from Verint, the leader in networked video security solutions worldwide.*

### Verint.

### Powering Actionable Intelligence.®

Verint® Systems Inc. is a leading global provider of analytic software-based solutions for security and business intelligence. Verint solutions help organizations make sense of the vast voice, video, and data available to them, transforming this information into *actionable intelligence* for better decisions and highly effective performance.

Since 1994, Verint has been committed to developing innovative solutions that help global organizations achieve their most important objectives. Today, organizations in over 50 countries use Verint solutions to enhance security, boost operational efficiency, and fuel profitability.
